

**Self-recovery: each tool vs its own stable KOs at 0% removal
(BLIMMP variants share BLIMMP+sub stable set as common denominator)**

Each tool's ground truth = own stable KOs at 0% removal (≥ 2 of 3 replicates). BLIMMP_prior & BLIMMP_nosub use BLIMMP+sub's stable set as denominator for direct comparison. | BLIMMP thresholds (ko_probability): direct > 0.01, neighbor > 0.01, +sub > 0.01
